If user enters full name, selects rsvp response and meal type for both guest 1 & guest 2 but no other details will they be stopped from progressing and directed to missing input	✗	Test passed - form performed in correct expected manner
If user enters full name, selects rsvp response and meal type for both guest 1 & guest 2 and partial email will they be stopped from progressing and directed to missing input	✗	Test passed - form performed in correct expected manner
If user enters full name, selects rsvp response and meal type for both guest 1 & guest 2 and full email will they be stopped from progressing and directed to missing input	✓	Test passed - form performed in correct expected manner - user is directed to Thank You rsvp-response page

Other noted observations

The user can complete the form without entering a full name.		Restrictions must be put in place to handle first and last
An invalid email address can be entered but successfully proceed to confirmation page		Validation needs to be assigned to check email address
If a guest is solo and enters n/a for the guest 2 name they can still add a meal type		Functionality needs to be assigned to handle these instances
